MAGIC portal – Numbering Guide

Allocating numbers via MAGIC is a simple process.

Single Number Activations
You can select from the list of presented numbers, or use the lookup tool to find a number you want. For those used to using NTS API selecting a number here performs the ALLO and ACTI commands in one for you.

Block Activations
There is a restriction of a maximum of 100 numbers in a block. If you required more than 100 please contact support@magrathea-telecom.co.uk

When you SET a target on a block it will set the same target on every number in the block, if you want a different target on any individual number you will need to do a separate SET on just that number for it to be updated.

NB. If you use the number itself as part of the target then this number will increment for each entry in the block (e.g. the target will correspond with the number).

For example, a block of two numbers starting at 08715045378, if the target is entered as S:08715045378@mydomain.com then the result will that the numbers are SET as:

> S:08715045378@mydomain.com
> S:08715045379@mydomain.com

Check status of numbers

Simply use the SET/VIEW button to return the current settings and to SET new ones.

Please note that the portal currently only supports the management of UK numbers, including ported.
