
Co-location

Co-location is a crucial value added service that we offer to clients who want to get their equipment as close as possible to our network, in a secure location. Our co-location facility is based in the world renowned Telehouse East datacentre.

This service is ideal for technology companies who want to have their equipment hosted in a secure facility offering direct connectivity to the Magrathea network as well as the best IP routes worldwide through our partners.

Why choose Magrathea for this service?

- You will have direct connectivity into our network
- Your servers will be at the heart of the UK internet
- Our service is competitively priced
- Remote hands facility- Onsite tech support should you need assistance and are unable to attend site yourself- all with one point of contact.

How it works

For customers using our IP services, this ensures that the route between our equipment and yours is optimal, as you will be connected directly to our core network. For high volume established customers we can also offer the option of direct E1 connection to our switching equipment.

Co-locating with Magrathea also means you have access to our full internet connectivity, with multiple links to a whole variety of providers to ensure the best possible IP routes worldwide. Your customers then benefit from our world class IP network, which we are constantly monitoring and updating. This frees you from trying to keep your own connectivity up to date with a rapidly changing internet.

Our co-location facilities are in the world renowned datacentre Telehouse East and are available from 2U to a full 42U rack, depending on your needs.

Direct Connection to Magrathea

We offer our co-location customers a direct connection to our network, cutting out the internet. This enhancement is designed for communication providers with high volume customers.
