
Numbering

We offer a complete range of UK and Irish numbers; including geographic numbers, free phone numbers, revenue generating numbers and VoIP numbers.

This service is ideal for internet telephony companies who want to provide an end to end telephone service.

Why choose Magrathea for this service?

- Our packages are flexible and our prices are competitive
- We have a user friendly API with excellent functionality
- We offer knowledgeable support to help you comply with industry registration procedures if required

How it works

Our pricing models are simple, based on how many numbers are used or the capacity consumed.

Our advanced client API enables you to select and provision numbers from our database in real time, so that your customers can sign up for a number and be up and running within seconds. All our numbers are also available with our added value services such as fax to email or voicemail to email allowing us to save you time building your products.

We can use our world class IP network to deliver the calls either to your servers or in many cases direct to your customers. VoIP users have a choice of protocols: we support the traditional SIP system with a wide variety of codecs as well as niche protocols such as IAX2, which is native to deployments based on Digium's 'Asterisk' open source platform.

If you have a PSTN based application that provides 'out of area' subscriber numbering, we can route the numbers to your customers' 'real' number — all as part of one single package. See our Chargeable Number Translation Service (NTS) for details.

Numbers available from Magrathea include:

- UK geographic subscriber numbers — complete countrywide coverage.
- Irish geographic subscriber numbers — a complete list of area codes.
- 056 numbers — designated by Ofcom for use with 'New Voice Services' such as voice over broadband.
- 070 personal numbers — numbers designed to be used as contact numbers or a single number for travelling users, wherever they might be.
- 0800/0808 numbers — business contact numbers free to the caller where the user receiving the call pays the charge.
- 084x/087x numbers — number translation numbers mainly used to provide business contact numbers.

- 09x premium rate numbers — these numbers are available for services where the caller pays for the content delivered on their own telephone bill.
- 'Gold' numbers — are available for all the above number types. Memorable numbers, ending 0000 or 1234 for example, will enable your customer to maximise their sales opportunities and will provide an excellent ROI when used in advertising.

Direct Connection to Magrathea

If you use our Numbering Service, we can offer you a direct connection to our network, cutting out the internet. We offer special connection rates to all customers who have co-located equipment, have a direct interconnect into us, or use our hosted billing service.

A direct connection is ideal for communication providers with high volume customers.

We can use various methods to set up a direct connection including BGP for ISP clients and a static link with Magrathea provided IP addressing for customers with no BGP router.
